AB - PURPOSE: To check the validity of use permission, by setting and
      resetting the right to use onerous software and firmware for
      every user.
      CONSTITUTION: An information processing device 5 is provided with
      a storage part for key information 1, which is used to
      distinguish a user from one another, and a display part 14 for
      the right of using which is so initialized that the right to use
      every onerous software or/and onerous firmware 13 is not given to
      users. A display indicating that the right of using is given to a
      user is set on the display part 14 for the right of using by
      validation value, which is collated with key information 1 to
      discriminate whether the right of using should be set or reset,
      and use permission information 4 for every onerous software and
      onerous firmware the use of which should be permitted. Only when
      the display indicating that the right of using is given to the
      user is set on the display part for the right of using, the user
      is permitted to use onerous software and onerous firmware.
